

FarmAXE is effective against just about every general pest problem - indoors and out. FarmAXE® has an effective flushing action, good knockdown properties, and a long-lasting residual life. NOW with Controlled Particle Technology™ and Transigel Rheology System™ for even better insect control.

FarmAXE® 125 SC Concentrate Insecticide - the GREAT all- rounder

FarmAXE 125 SC is available in a user friendly 100mL pack with measure chamber attached.

FarmAXE is a versatile all-rounder because it is effective against many pests, it has an effective flushing action, good knockdown properties and a long-lasting residual life.

It is stable in sunlight, high temperatures and on alkaline surfaces. It can be used both indoors and outdoors; in domestic, industrial, commercial and government premises. FarmAXE is odourless and stable in sunlight, alkaline conditions and in high temperatures.

FarmAXE offers users a very sensible and reliable tool without endangering the well being of the people, their pets and their properties. This makes FarmAXE the great all-rounder!

Formulation

Why a suspension concentrate? FarmAXE 125 SC is formulated as a suspension concentrate. Therefore it has the good handling properties of an EC and the biological activity of a WP formulation. It is water-based and non-flammable. FarmAXE SC is not classified as dangerous goods with the respect to transport on land and storage. There is no smell. The active material remains on the treated surface and is readily available to be picked up by pests.

Proven Performance

FarmAXE is based on the original Solfac 125 SC from Bayer, but has had significant formulation enhancements to improve its performance and storage characteristics.

A little bit goes a long way

FarmAXE SC is a concentrated 12.5% formulation. One 100mL container makes up to

25 litres of full strength solution. This makes it much more economical than other synthetic pyrethroid sprays commonly available.

Easy to measure

The 100mL plastic bottle comes with a handy measure chamber attached to allow simple and accurate dosing.

FarmAXE Safety and the Environment

Toxicity

Based on internationally recognised data and rules for calculating toxicity of mixtures the acute toxicity data for the formulation is:

Oral LD50 rat	1108 mg/kg
Dermal LD50 rat	>5000 mg/kg
Inhalation LD50 rat	800 mg/m3

These numbers are of a similar magnitude to other pyrethroid SCs, but because FarmAXE has such a low use rate the toxicity of a spray mix is much less than most other products.

Low toxicity to mammals and birds

FarmAXE SC has a relatively low toxicity for mammals and birds and is rapidly excreted if ingested. Beta-cyfluthrin like other pyrethroids is toxic to fish and aquatic invertebrates. Aquarium or fish tank air filter pumps must be switched off. Do not pollute waters with empty containers or surplus spray.

Beta-cyfluthrin is toxic to bees. Earthworms are unaffected at recommended rates.

FarmAXE Biological Properties

Effectiveness at very low doses

FarmAXE SC is highly active and will control the broad spectrum of public health pests at very low rates. It acts mostly as a contact insecticide but also has stomach poison activity. It penetrates waxy insect cuticle very rapidly, resulting in a quick knockdown of the pest.

Maximum flushing action

FarmAXE SC will flush pests out of their hiding places making the infestation very visible. This serves to locate the size of the problem and helps pinpoint pest harbourages.

Effective against pests

FarmAXE SC is registered and effective against cockroaches, spiders, ants, fleas, flies, silverfish, clothes moths, carpet beetles, bed bugs, mosquitoes and stored product pests.

Long residual life

The hardest pest to control is the German cockroach. Independent field trials have shown excellent results with over 90% control even after 18 weeks.

The great all-rounder

FarmAXE is effective against just about every general pest problem and can be mixed in the sprayer for the whole day's work. FarmAXE SC

can be used in all types of situations from domestic to commercial, indoors and outdoors. This makes FarmAXE SC the GREAT ALL-ROUNDER.

Product Specifications

Product name:

FarmAXE SC Insecticide

Active Ingredient:

Beta-cyfluthrin

Concentration: 125 g/L

Formulation Type:

Suspension Concentrate

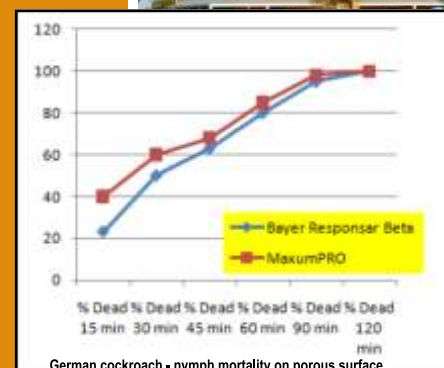

Chemical Compound:

Synthetic-pyrethroid

Scheduling: S6 (Poison)

Packaging:

100 mL plastic bottle with measuring chamber attached

New FarmAXE Concentrate Insecticide - the great all-rounder!

What makes new FarmAXE the best all-round pest control product on the market today?

Features	Benefits
Can be used indoors and outdoors	Flexible application
One 100mL makes 25 L of full strength solution	Excellent value for money
FarmAXE is stable in sunlight, alkaline conditions and high temperatures	Use with confidence
Is virtually insoluble in water and binds to organic matter in the soil	It stays where you spray
Long residual activity	Pest free environment
Effective against a wide range of domestic and commercial pests	One product does the lot
No stains or visible residues	Clean environment
Highly concentrated formulation	A little product goes a long way
No odour	Pleasing to use

Now you can treat nuisance pests with confidence.

1 Bottle Makes 25L SPRAY
