

In Focus

**High Quality
EDTA Chelates**

Key-El

- *Key-El is an essential plant micronutrient range that is chelated in an Ethylene Diamine Tetraacetic Acid (EDTA), to create a highly efficient soil trace element*
- *The chelate delivery package further ensures that the nutrient is plant available via the root system*
- *Key-El products ensure rapid and effective uptake of the nutrient guaranteeing that the plant is well supplied*
