Eradicate change pellet colour from **YELLOW** to **RED**

Eradicate Snail & Slug Bait is changing the colour of the pellets from yellow to red. This change is designed to improve user awareness on bait identity; all iron based baits will now be recognised and coloured red.

- The grain based bait formulation remains unchanged apart from the colour
- The change will occur progressively over the coming months
- The small Home Garden pack size has always contained red pellets and will remain unchanged

Eradicate Snail & Slug Bait is non-toxic to pets, animals and native fauna when used as directed and has no withholding periods when applied in agricultural situations.
