Product Information Sheet

Delta Force Pro

Analysis: 10g/L Deltamethrin

Group **3A** Insecticide

For Indoor and outdoor control of cockroaches, spiders, ants, fleas, carpet beetles, silverfish and bed bugs.

Delta Force Pro surface spray is a general purpose residual insecticide for both indoor and outdoor use.

It can be used on both porous and non-porous surfaces, and once dry will adhere and not be affected by rain.

Delta Force Pro is non-staining and non-flammable. It is typically applied as a surface spray and/or a crack and crevice treatment.

Crack and crevice treatments are used to target breeding areas and points of entry for insect pests.

Benefits:

- As a member of the synthetic pyrethroid group Delta Force Pro has very low toxicity to humans
- Ideal as a general pest surface spray with residual properties
- Adheres to outdoor surfaces after drying and will not be affected by rain
- Delta Force Pro is both an inexpensive product to purchase and it has a low dose rate making it highly cost effective to use
- Its broad spectrum activity allows it to control a side range of insect pests.

Pack Sizes: 1L pack

Product Characteristics:

Colour	Specific Gravity
White liquid	1.01

Directions for application (refer to product label for more detailed instructions)

Situation	Pest	Rate per 5L water	Comments
Domestic, Commercial and Public Buildings. Including:	Cockroaches	Initial treatment 150mL	Conduct a thorough inspection and apply to known and potential cockroach harbourages. A barrier application around areas where cockroach infestations may be originating is also suggested.
	Web spinning spiders	(Refer to use as a surface spray section for dilution rates)	Spray spiders, their webbing and areas where spiders may hide directly. It is recommended that webbing is left in place for a few days after application to optimise efficacy.
Food processing establishment	Non webspinning spiders		Spray areas where spiders are known to occur.
	Shops		Where possible locate the nest and spray directly into nest entrances. Penetration of insecticide can be assisted by pre-wetting sandy and porous soils with water. A thorough soaking treatment with insecticide mixture is required to destroy the nest. If nest cannot be located then spray infested areas.
Factories	Ants		Clean and vacuum infested areas and dispose of dust collected in the garbage in a sealed plastic bag. Lightly spray infested areas concentrating on areas under furniture etc. Treat pets with a suitably registered flea control product. See also the notes on application to carpets on the label.
Ships	Fleas		Direct spray to area of potential infestation eg under skirting boards and furniture.
Offices	Silverfish		Apply to the bed-frame and walls, cracks, crevices and skirting boards in the vicinity of the bed.
Schools	Bed bugs		Treat infested areas. Inspect roof voids and remove any old bird nest material. A suitably registered dust product such as Barmac Permethrin D Insecticide Dust is recommended for treatment of roof void areas.
Store Rooms	Bird mites		Apply to infested carpets particularly in areas of little or no traffic and underneath windows where adult beetles may be entering the building. See also the note on application to carpets on the label.
Barracks	Carpet beetles		Spray surfaces in areas where clothes are stored. DO NOT spray the clothes themselves.
Hospitals	Clothes moths		
Private Houses
