Fungicide Resistance Warning

GROUP	4	FUNGICIDE
--------------	----------	------------------

METALAXYL 250 EC is a member of the Phenylamide group of fungicides. For fungicide resistance management, METALAXYL 250 EC is a Group 4 fungicide.

Some naturally occurring individual fungi resistance to METALAXYL 250 EC and other Group 4 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungi population of these fungicides are used repeatedly. These resistant fungi will not be controlled by METALAXYL 250 EC and other Group 4 fungicides, thus resulting in a reduction in efficacy and possible yield loss.

Since the occurrence of resistant fungi is difficult to detect prior to use, Accensi Pty Ltd accepts no liability for any losses that may result from the failure of METALAXYL 250 EC to control resistant fungi.

RE-ENTRY PERIOD: DO NOT re-enter treated area until sprayed crop is dry.

PROTECTION OF WILDLIFE, FISH, CRUSTACEA AND ENVIRONMENT: DO NOT contaminate streams, rivers or waterways with the chemical or used containers.

If not recycling, triple rinse, break, crush or puncture and deliver empty packaging or appropriate disposal at an approved waste management facility. If an approved waste management facility is not available, bury the empty packaging 500mm below the surface in a disposal pit specifically marked and set up for this purpose clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations.
