## Section 3 - Composition/Information on Ingredients

Ingredients	CAS No	Conc.%	TWA (mg/m <sup>3</sup> )	STEL (mg/m <sup>3</sup> )
Nutrismart**	n/a	100	not set	not set

\*\*Biological fertiliser based on specialised yeasts and lignocides

This is a commercial product whose exact ratio of components may vary slightly. Minor quantities of other non hazardous ingredients are also possible.

The SWA TWA exposure value is the average airborne concentration of a particular substance when calculated over a normal 8 hour working day for a 5 day working week. The STEL (Short Term Exposure Limit) is an exposure value that may be equalled (but should not be exceeded) for no longer than 15 minutes and should not be repeated more than 4 times per day. There should be at least 60 minutes between successive exposures at the STEL. The term "peak" is used when the TWA limit, because of the rapid action of the substance, should never be exceeded, even briefly.
