

Paton Banana Special is a proven general purpose formulation which contains essential nutrients for healthy growth in a wide range of garden situations.

This product contains a wetting agent that will assist efficient water use.

Paton Banana Special is particularly suitable for vegetables and fruits but can also be used for general application to lawns, shrubs and flowers. Banana Special promotes vigorous and healthy growth in most plants and long term feeding from an organic base. Not recommended for native plants.

Important Notes

- Always water fertiliser in well after application. Watering should result in a thorough saturation of the area.
- Avoid direct contact with plant roots.
- Even, light and regular applications of this product will achieve the best results.
- Always reseal bags after use.
- Sandy soils will require lower rates of fertiliser but more frequent applications.
- Do not exceed the recommended application rates.

Pack Sizes: Available in 20kg Bags

Product Analysis

| Elements | Percentage |
|---------------------------------|------------|
| Nitrogen (N) Total | 6.7% |
| as ammonium | 6.1% |
| as organic | 0.6% |
| Phosphorus (P) Total | 4.2% |
| as water soluble | 3.0% |
| as citrate soluble | 0.9% |
| as citrate insoluble | 0.3% |
| Potassium (K) Total as chloride | 5.0% |
| Sulphur (S) Total as sulphate | 12.0% |
| Calcium (Ca) Total | 8.4% |

Directions for application

Apply to the drop zone of the plant and lightly work into the soil surface or cover with an organic mulch. Be careful not to damage fine shallow surface roots as this renders them prone to fungal attack and fertiliser burn.

Apply sparingly on potted plants as excessive use of fertiliser can cause burning relatively easily. It is safer to apply small amounts on a regular basis.

| Crop | Rate | Comments |
|-------------|-----------------|---|
| Vegetables | 100-150g per m2 | Prior to planting the crop, dig into the top 10cm, (4 inches) of soil. |
| | 25-30g per m2 | After planting, apply every 4 weeks until harvest. |
| Fruit trees | 100-150g per m2 | On young trees apply to the drip zone in late winter and late summer (July and February). |
| | 0.5-3kg per m2 | On mature trees, apply per tree at a rate of 500gm per tree per year of growth to a maximum of 3kg. Apply to the drip zone during late winter and early spring. |
| Shrubs | 100-150g per m2 | Apply to the drop zone in early spring. Where possible work into the soil surface or mulch over with a good organic mulch. |
| Flowers | 70-100g per m2 | Prior to planting the crop, dig into the top 10cm, (4 inches) of soil. |
| | 35-50g per m2 | When flowers produce buds, work into the soil surface or mulch over with a good organic mulch. |
| Lawns | 50g per m2 | Evenly broadcast onto the soil surface and rake into the soil to a depth of approx 5cm and water in well. |
| | | Spring and autumn, evenly broadcast and water in well. |
