Ferticote—Strawberry Blends

Ferticote is a granular fertiliser with prolonged action produced by Amgrow and is specifically designed for open field applications.

Ferticote is a blend of coated and uncoated fertiliser based on the Multicote polymer coated controlled release fertiliser technology of Haifa chemicals in Israel.

The insoluble polymer coating prevents the rapid release of the fertiliser core. Instead, nutrients are released in a slow and gradual manner that more effectively meet plant needs.

The slow, constant release means the plant enjoys continuous feeding with no fear of hazardous excesses or damaging deficiencies.

The only factor effecting this release rate is soil temperature—as the temperature increases, the release rate increases.

This Ferticote formulation has been designed for strawberry production.

The product is designed to meet nutrient demands of strawberries with a single application incorporated into the planting hole at 15 grams per plant

PRODUCT	MONTHS	SIZE
Ferticote 10-3-18 +TE	4	20 kg
Ferticote 11-3-18 +TE	6	20 kg
Ferticote 10-3-18 +TE	8	20 kg
