WARNING: DO NOT SWALLOW. The dust from this product may act as an irritant. Avoid inhalation and contact with the eyes and skin. If eye contact occurs, flush with water immediatly. Seek medical attention.

KEEP OUT OF REACH OF PETS AND CHILDREN

This product contains heavy metals impurities. Its use may result in accumulation of Cadmium and Mercury in the soil. Depending on soil characteristics, irrigation water quality, plant species and variety, crop uptake of cadmium may lead to residue levels in plant and animal products in excess of the maximum level specified by the Australia New Zealand Food Standards.

PRECAUTIONS: ALWAYS WATER IN WELL AFTER APPLICATION. Do not apply if the max temperature exceeds 30°C for a period of days prior to or after application or if the soil is dry or the lawn is under moisture stress. Ensure adequate watering occurs after application to avoid any fertiliser burn. Always apply in the cool of the day.

LIABILITY: This product must be used strictly as directed. Amgrow will not be liable for any loss or damage rising from a failure to follow directions and precautions.

CITRUS, FRUIT & FLOWER

Amgrow's Citrus, Fruit, and Flower is an organically based blend specifically designed to meet the unique needs of various fruit trees and flowering plants. This formula contains a comprehensive range of essential nutrients, including potassium, which is essential for the development of citrus, fruit, and flowers.

SUITABLE FOR:

Amgrow's Citrus, Fruit and Flower is suitable for a wide range of plants including:

- Lemons, Limes, Mandarin, Oranges, Grapefruit and other Citrus types
- Stone fruit including peaches, nectarines and apricots
- Strawberries, Avocados, Mangoes, Passionfruit
- Flowering plants including Annuals, Roses and perennials

HOW MUCH DO YOU NEED:

SMALL PLANTS: Apply 50-75 grams per square metre, 3 or 4 times each year. Feeding during the months of August, October, December and March will give the best results.

LARGE PLANTS: Apply 100-150 grams per square metre, 3 or 4 times each year. Feeding during the months of August, October, December and March will give the best results. In sandy soils use less, approximately half, the applications above but feed more regularly. This will prevent excess nutrients leaching into the environment and provide more nutrients to the plant.

APPLICATION HINTS:

Apply sparingly to potted plants as excessive fertiliser can cause burning relatively easily. It is much safer to apply small amounts on a regular basis. Patches can appear if an even spreading of the product is not successfully achieved. If hand broadcasting, mixing the fertiliser with a carrier such as sand or soil before spreading can achieve a more even result. Alternatively apply less fertiliser but go over the area at least twice in different directions (one at a right angle to the other).

IMPORTANT THINGS TO REMEMBER:

- Always water fertiliser well immediately after application. Watering should result in a thorough saturation of the area.
- Avoid direct contact with plant roots, seeds etc.
- Even, light and regular applications of this quality product will achieve the best results.
- Always reseal bags after use and dispose of empty containers properly.
- Sandy soils will require lower rates of fertiliser but more frequent applications.
- Do not exceed the recommended application rates as this can be harmful to plants.

STORAGE: Store in a dry place. Store away from pets.
