

**APPLICATION HINTS:**

A uniform application of Paton's Natural Gypsum will achieve the best result. If hand broadcasting, apply less but go over the area at least twice in different directions (one at a right angle to the other).

**IMPORTANT THINGS TO REMEMBER:**

- Always water in well, immediately after application. Watering should result in a thorough saturation of the area
- Even, light and regular applications of this quality product will achieve the best results
- Always reseal bags after use and dispose of empty containers properly
- Do not exceed the recommended application rates as this can be harmful to plants.

**CAUTION:** All fertilisers should be used with care. Wear gloves and protect eyes from splashing.

**WARNING:** Use of this product may result in cadmium residues in excess of the Maximum Permissible Concentration (MPC) in plant and animal products and may result in accumulation of these residues in soils.

GYPSUM CLAYBREAKER

# 100% Natural Gypsum Claybreaker

- Breaks up and improves structure and drainage of clay soils
- Improves water penetration
- Environmentally friendly formulation.

## 100% Natural Gypsum Claybreaker

**PRODUCT ANALYSIS:**

Total calcium as sulphate	21%
Total Sulphur as sulphate	15.5%

Paton's Natural Gypsum is a safe, environmentally friendly product that will assist in breaking up of clay and compacted soils, improving the ability of air and water to penetrate the soil, greatly assisting root development and making planting easier.

Paton's Natural Gypsum works by aggregating clay particles, thus opening up tight soils and making it easier for water to penetrate. When water is absorbed and moisture is retained, water and nutrients are more available to the plant roots. Paton's Natural Gypsum is suitable for application wherever you have clay, or compacted soil conditions, particularly if these conditions are inhibiting root development and water penetration.

**HOW MUCH DO YOU NEED:**

**WORKING INTO BARE EARTH:** This is the ideal way to use Paton's Natural Gypsum, as it works best when incorporated into the soil. It can be applied with safety immediately prior to planting garden beds, shrubs or new lawn areas.

It is advisable to apply approx 400-500 grams per square metre and work well into the soil by digging or raking.

**ESTABLISHED GARDEN OR LAWN AREAS:** Paton's Natural Gypsum can be applied to established garden beds and lawn areas by broadcasting at a rate of 200-500 grams per square metre. For best results on garden beds lightly work into the soil around plants by gently tilling or raking, being careful not to disturb shallow roots.

On established lawns broadcast the product and water well. Spiking or aerating prior to application will greatly enhance results.

We recommend applications of Gypsum at least once each year, although splitting annual applications (into two half applications) on existing areas will bring better results.
