

# **TOMCAT**<sup>®</sup> WITH BROMETHALIN BLOX<sup>™</sup> Rodenticide

**AVAILABLE NOW FOR THE FIRST TIME IN AUSTRALIA.**

**TOMCAT**<sup>®</sup> with Bromethalin Blox is a revolutionary rodenticide that contains the active ingredient Bromethalin. It's the first product of its kind to be registered for use against rodents in Australia, and helps save users time and money with its effective knockdown when compared to anticoagulant alternatives.

## **THE FASTEST-ACTING BLOCK RODENTICIDE**

Rodents can consume a lethal dose of TOMCAT<sup>®</sup> with Bromethalin Blox rodenticide in just a single night's feeding and may succumb to the poison in as little as 2 days. This means more rodents can be controlled with less bait. It's unique formulation also makes it effective against rats and mice that are resistant to anticoagulant solutions.

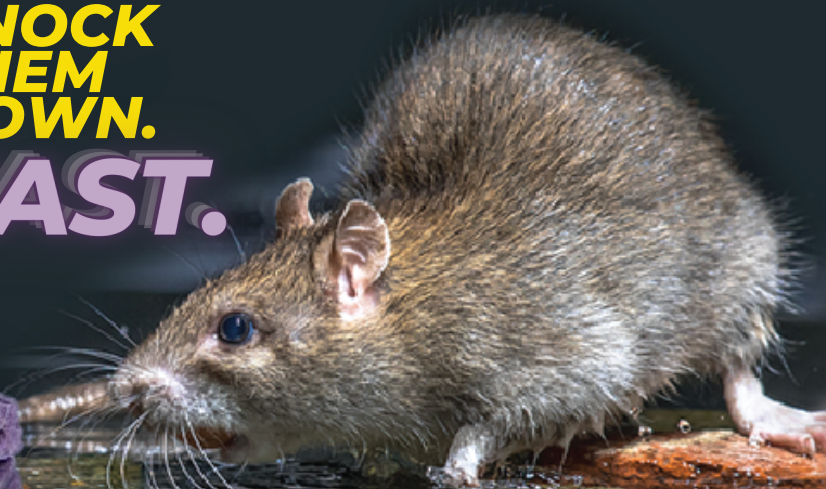

## **SUPERIOR PRODUCT & TECHNOLOGY**

Bell Labs' unique extrusion process produces a hard, multiple-edged bait that combines the palatability of a meal bait, with the weatherability of a paraffinized bait. TOMCAT<sup>®</sup> with BROMETHALIN BLOX RODENTICIDE is registered for use in and around industrial, commercial, and agricultural buildings. It is suitable for an initial rodent treatment, population knockdown, or as part of a rotational bait program.

**TOMCAT**<sup>®</sup> with BROMETHALIN BLOX RODENTICIDE is available as a convenient, ready-to-use block bait in 8kg and 1.8kg pails exclusively from Barmac.
