

About Amgrow

Amgrow products have been helping gardeners throughout Australia grow better plants for over three decades. Amgrow potting mixes, composts and fertiliser products are all Australian made from quality ingredients and offer guaranteed performance.

KikStart® the better way to fertilise your garden and lawn.

Kick-starts healthy growth. KikStart® is a unique fertiliser that is manufactured from enriched composted manure. KikStart provides essential nutrients for plant growth in a natural form that encourages healthy active growth.

Provides sustained nutrient release. KikStart® is a granular fertiliser that breaks down slowly over time releasing the nutrients in a controlled way to provide sustained growth for up to three months.

Organically enriches and improves soil. The enriched manure components of KikStart® improve the health and vitality of the soil. They encourage earthworms and beneficial micro-organisms that assist soil health.

Contains wetting agent. The wetting agent incorporated into each KikStart® granule assists water and nutrients to penetrate into the root zone when rainfall occurs.

KikStart® the easy to use fertiliser for your garden and lawn.

Easy to Spread granular formulation. KikStart® granules are easy to spread on gardens and lawns. **Low odour.** KikStart® is made from fully composted organic materials and has a low odour. **No need to water in.** Because of its gentle organic base formulation Kikstart® will not burn. Therefore there is no need to water it in immediately.

20kg

- KICK STARTS HEALTHY PLANT GROWTH
- PROVIDES SUSTAINED NUTRIENT RELEASE
- ORGANICALLY ENRICHES AND IMPROVES SOIL
- FOR FRUIT TREES, ANNUALS, VEGETABLES NATIVES & LAWNS

Using Kikstart

Flower and vegetable beds - 150g
Spread 150g of KikStart® per square metre and dig into soil to a spade's depth prior to planting. Apply a further 150g per square metre every 6-8 weeks.

General garden use - 100g
Apply 100g per square metre around the drip line of the foliage. Apply three or four times a year. For flowering species do not apply immediately before flowering.

Native & sensitive plants - 50g
Apply 50g per square metre for native shrubs and sensitive species such as azaleas.

Fruit trees - 200g
For immature trees apply 200g per metre of tree height. Spread evenly around the area covered by the tree foliage. Do not apply within 15 centimetres of the tree trunk. Repeat applications three times a year. For mature trees apply 4kg per tree. Spread evenly around the area covered by the tree foliage. Do not apply within 15 centimetres of the tree trunk. Repeat applications three times a year.

Lawns - 200g
Apply 200g per square metre. For best results use three times a year in Autumn, Spring and Summer.

Measurement Guide:
1 cupful = approximately 250 grams
1 handful = approximately 50 grams

Precautions

- Do not apply to potted plants.
- For potted plants use Zest Soluble Fertiliser or NutriGrow Controlled Release Fertiliser

KEEP OUT OF REACH OF PETS & CHILDREN

Pet Safety: Some pets may be attracted to this product. To prevent consumption after application, rake granules into top soil and water well.

Typical Analysis

Total Nitrogen	3.0%	Iron	0.1%
Total Phosphorous	2.6%	Copper	0.02%
Total Potassium	1.5%	Zinc	0.03%
		Manganese	0.05%
Calcium	5.9%		
Magnesium	0.5%
