Treatment for water repellent soil

- Wettasoil is a concentrated soil wetting agent for use on gardens, lawns, potting mixes and mulches. It improves the penetration of water so it can reach deep down to the roots.
- Regular use will rewet dry spots and stop new ones from forming.
- More effective water penetration means you don't need to water as often; saving water, time and money.
- Wettasoil combines environmentally friendly wetting agents with **seaweed and other ocean extracts** that reduce plant stress and improve soil health.

Directions for Use

Wettasoil should be part of your gardening routine. While it will last in the soil for up to 12 months, depending on soil and climatic conditions, an application every six months will provide the best results. It is best to apply prior to and during rain periods as this will build up soil water reserves and provide for better drought resistance during periods of low rainfall.

Gardens, lawns and mulched areas

Mix 15mL of Wettasoil concentrate in a 9 litre watering can and apply over 4m². Water in well after application. Repeat on a regular basis.

Pots and containers

Mix 15mL of Wettasoil concentrate in a 9 litre watering can. Water pots and containers slowly until water starts to drain from the bottom of the pot. Wettasoil can be used at every watering to make watering quicker and more effective. In this case add 3mL of Wettasoil to each watering can.

SAFETY: Avoid contact with eyes. If eye contact occurs, flush eyes under running water. If irritation occurs, seek medical advice.
